# PODIUM — the paper that lives in the room

**Five sheets to print. Three of them you write on every day.**

16 October 2026

---

The laptop records everything that happens. These exist for everything that doesn't — the person who looked and kept walking, the morning the light changed, the cue you reworded without writing it down. None of it can be collected by software, and all of it decides whether the numbers that *are* collected mean anything.

| Sheet | Print | For |
|---|---|---|
| **Day sheet** | one per shift | Sessions as they happen, and the people who didn't have one |
| **Pose card** | one, taped up | The exact words the app says, so you don't improvise new ones |
| **Storyboard** | one | Half an hour, now, before the pilot starts |
| **Change log** | one, in the folder | The rule in `DECISIONS.md` that has had nowhere to be written |
| **Keep / cut** | one, at the end | What survives the pilot |

## The day sheet

The top half is the running record. The bottom half is the part that matters and the part everyone forgets.

**Tick as it happens, not at the end of the day.** At six o'clock you will remember three walk-aways out of eleven, and the three you remember will be the interesting ones, which is the worst possible sample.

Why it earns a line on paper when the laptop already counts sessions: the funnel on the operator screen can only count people who touched it. A return rate of 30% out of people who came over is a different number from 30% of people who saw it — and the gap between those two is the entire question of whether this works on a gym floor or only in a demo.

# PODIUM — day sheet

One per day on shift. The rows the laptop cannot fill in are the ones at the bottom.

DATE _____ ON SHIFT _____ LIGHT READING _____ CAMERA LOCKED? Y / N _____

## Sessions

| TIME | NEW / BACK | SOLO / SQUAD | KEPT? | SENT? | MINS | QUEUE | WHAT THEY SAID |
|---|---|---|---|---|---|---|---|
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |

## The ones the laptop never sees

These decide whether the funnel numbers mean anything. Tick as it happens, not at the end of the day.

**Looked, did not come over** ☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐

**Came over, walked away before starting** ☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐

**Saw a queue and left** ☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐

**Asked about it but would not do it today** ☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐

**What the light was doing · what broke · anything a member said twice**

## The pose card

Generated from `config.json`, so the words on the wall are the words on the screen. If a cue gets reworded in the app, print this again — and write the change on the change log, because a reworded cue changes what members do, which changes what the photographs show.

Tape it where the operator stands, not where the member stands. The member gets the screen; the operator gets the card.

# PODIUM — Physique

Front double biceps, side chest, back double biceps

Tape this where the operator can see it. The words are the ones on screen — do not improvise new ones, they are part of the measurement.

1

## Stand on the mark

Arms relaxed by your side, feet on the ring, look at the camera.

7 seconds · the one that has to match every visit

2

## Front double biceps

Arms up and out, wrists curled in. Breathe out.

7 seconds

3

## Side chest

Turn to your right. Near arm across, press the chest forward.

6 seconds

4

## Back double biceps

Turn around. Elbows up, squeeze the shoulder blades.

6 seconds

5

## However you like

Move. Mess about. This one is for the post.

4 seconds

Generated from config.json · if a cue changes in the app, print this again

## The storyboard

Half an hour, with the laptop shut.

Eight boxes, one per screen. Draw what a member sees in each, from memory. The box you cannot fill in is the finding — it is the screen you have stopped looking at, and it is usually where people are leaving.

Then guess which box loses the most people, write the guess in the margin, and only then open the operator console and look. If your guess is wrong, that is worth more than the number is.

# PODIUM — what a member sees

Draw each one from memory, without opening the app. The box you cannot fill in is the finding.

### 1 · Walks up

What makes them stop?

### 2 · Check in

What do they type, and what do they think it is for?

### 3 · Consent

Three lines. Do they read them?

### 4 · Pose choice

Physique or Athlete. Do they know which they are?

### 5 · The mirror

Standing on the mark. What are they looking at?

### 6 · Thirty seconds

Three poses and a candid. Where do their eyes go?

### 7 · Review

Five photos. Which do they reach for first?

### 8 · Walking away

What do they say to the person they came with?

Then: which box has the most people leaving? The operator console counts it — guess first, then look.

## The change log

`DECISIONS.md` has said this for weeks:

> One change at a time. If you change the light, the price, the script or the poses mid-pilot, the metric it affects restarts from that date and you say so in the log.

There has never been a log. That is how a rule quietly becomes a sentence nobody follows — not by being broken, but by having nowhere to live.

Keep this in the folder with the day sheets. Four weeks from now it is the difference between "keep rate was 61%" and "keep rate was 61%, and here is every reason that number might not mean what it looks like".

# PODIUM — what changed, and when

One change at a time. If you change the light, the price, the script or the poses, the metric it affects restarts from that date — and a pilot with an unwritten change in it is four weeks of nothing.

| DATE | WHAT CHANGED | WHY | WHICH NUMBER RESTARTS |
|---|---|---|---|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

**Changes that do NOT need a line here:**

Anything that cannot reach a member or a measurement — a typo on the operator screen, a note you wrote, clearing demo rows. If you are not sure whether it counts, write it down. The log costs a line; the doubt costs the pilot.

## Keep / cut

You said it yourself: add everything, delete what we don't want at the end. This is the end-of-pilot sheet for doing that honestly, and it is worth reading once now so you know what you are judging.

Go down the list after the four weeks. For each one: **did a member ever benefit from this, and would you build it again?** Tick one box. Don't argue with yourself on paper — the arguing happens afterwards.

```
MEMBER-FACING                                    KEEP   CUT   ?
  The alignment mirror (ghost + lock ring)       [  ]  [  ]  [  ]
  Pose choice — Physique or Athlete              [  ]  [  ]  [  ]
  The 5-second pre-roll                          [  ]  [  ]  [  ]
  Silhouettes during capture                     [  ]  [  ]  [  ]
  The candid frame                               [  ]  [  ]  [  ]
  Send / keep as two separate toggles            [  ]  [  ]  [  ]
  Side-by-side compare                           [  ]  [  ]  [  ]
  Slide-across compare                           [  ]  [  ]  [  ]
  Flip compare                                   [  ]  [  ]  [  ]
  The visit timeline                             [  ]  [  ]  [  ]
  The progress card                              [  ]  [  ]  [  ]
  "Come back in 4 weeks?" at the end             [  ]  [  ]  [  ]
  Delete everything about me                     [  ]  [  ]  [  ]

UNDER THE BONNET
  Registering photos onto the first visit        [  ]  [  ]  [  ]
  Camera lock (exposure / WB / focus)            [  ]  [  ]  [  ]
  Light drift watch                              [  ]  [  ]  [  ]
  Squad mode (2–3 people)                        [  ]  [  ]  [  ]
  Code identity mode (no phone number)           [  ]  [  ]  [  ]

OPERATOR
  Readiness checks                               [  ]  [  ]  [  ]
  Sealed dashboard until the end                 [  ]  [  ]  [  ]
  Queue counter                                  [  ]  [  ]  [  ]
  The generated write-up                         [  ]  [  ]  [  ]
  CSV export                                     [  ]  [  ]  [  ]
```

**Three questions to answer underneath, in writing:**

1. Which of these did a member ever mention, unprompted?
2. Which did you, as the operator, actually use on a busy evening?
3. Which one would you miss if it vanished overnight?

Anything that is a no to all three is a cut, however much work it was. That is the whole point of writing it down before you are attached to the answer.

---

*All five sheets are generated — `node tools/make-sheets.mjs` and `node tools/make-cards.mjs` — so they cannot drift from the app. Print them again whenever the app changes.*
